Jonah Harris - jlh6487

Alex Lostak - agl3287

Team Plan

Git URL: https://github.com/alexlostak/project5

Jonah Harris

a) Updated Model Components
b) Designed and implemented Controller Components

Alex Lostak

a) Designed and implemented View Components
b) Designed and implemented animation functionality
c) Updated Critter Subclasses
d) Performed the CSS wrapping of final product

The work was divided evenly between the two of us. Jonah was in charge of updating the Model Components and handling the Controller Components while Alex handled the View, Animation, Critter Subclass Components, and the CSS wrapping of the final project. We spent approximately 12 hours together working side by side developing the program and coming up with design ideas. Jonah's knowledge of the Critter based functions from the previous program and creativity helped to create a professional controller and screen interface and intuitive functionality whereas Alex's familiarity with the world functionality in the previous program helped implement Animation, the new DisplayWorld and the rest of the View components. Lastly, Alex' previous experience and expertise in CSS helped to wrap the final product and make it look attractive and professional while meeting and exceeding required criteria.
